

Rental surface aerators

In order to fulfill the growing demand for temporary aeration installations, Noardling offers the rental of floating slow-speed surface aerators.

From Sneek, The Netherlands, we can deploy an aeration unit, complete with the corresponding drive system and features such as a control cabinet with frequency regulation.

We supply the high-efficiency aerator ready for use and can take care of both installation and dismantling.

Rental Surface Aerators

Rental supply

We offer you the rental supply of our high-efficiency, slow-speed surface aerator with quick delivery. Our service includes assembly and dismantling of both existing and rental units, and we can optionally provide a variable frequency drive (VFD) upon request.

The minimum rental period is one week. The rental price comprises a weekly rental price, with separate costs for transport, assembling, dismantling and other options.

Applications

- Control of blue-green algae (cyanobacteria)
- Prevention of fish mortality due to oxygen deficiency
- Control of botulism
- Conversion/renovation work at wastewater treatment plants (WWTP)
- Additional (temporary) oxygen supply in aeration basins
- Pond aeration
- Aeration of polluted water due to overflow
